(54) **LED DISPLAY ELEMENT AND DISPLAY APPARATUS**

(57) Abstract:

PROBLEM TO BE SOLVED: To enable the surface emission by using an LED chip to be a point light source, and increase the aperture ratio of the emission plane by placing the LED chip to be a light emitting element in a recessed case having an opening structure and applying a phosphor on the inner wall of the recessed case having the opening structure.

SOLUTION: An LED chip 1 to be a point light source is disposed in a recessed square case opened at the top, a phosphor 2 is coated on the inner wall of the recessed case 3, the LED chip 1 is disposed at the bottom of the recessed case 3, and the phosphor 2 is applied on the entire inner wall of the recessed case 3. The LED display element emits a light in a direction 6 perpendicular to the surface of a board 5 holding the case 3.
